

WEB SITE, INFORMATION COMMUNICATION TERMINAL, ROBOT
SEARCH ENGINE RESPONSE SYSTEM, ROBOT SEARCH ENGINE
REGISTRATION METHOD, AND STORAGE MEDIUM AND PROGRAM
TRANSMISSION APPARATUS THEREFOR

5

ABSTRACT OF THE DISCLOSURE

10 A web site 10 is provided in a communication network to
enable the selective provision of appropriate information,
by a site whereat only limited access is permitted, in
consonance with the access right of the source of a request
for information.

15 comprises: a data management system 19; a user agent
determination module 12, for ascertaining the type of a
transmission source from which an access request is
received; and response generation modules 15 to 18, for
acquiring, from the data management system 19, information
20 that is correlated with the type of the transmission
source, and for generating and returning a response,
wherein the data management system 19 stores main
information 19a, for which access is limited, and metadata
19b, which is information describing the main information
19a.
